

PRODUCT PORTFOLIO

Home Care & Soap / Detergent

Sodium Lauryl Ether Sulfate (SLES)

Sodium Lauryl Ether Sulfate (SLES) is a widely used surfactant in personal care products and household cleaners. Here are some common uses:

- Personal Care Products (e.g., shampoos, body washes)
- Household Cleaners (e.g., dishwashing liquids, laundry detergents)
- Industrial Cleaners
- Textile Processing
- Agrochemicals
- Emulsion Polymerization
- Firefighting Foams

Sodium Silicate Liquid / Lumps

Sodium silicate, whether in liquid or solid form, has a wide range of industrial and commercial applications due to its unique properties. Here are some common uses:

Sodium Silicate Liquid

- Adhesives and Sealants
- Detergents and Soaps
- Cement and Concrete Additive
- Water Treatment
- Paper and Textile Sizing Agent
- Corrosion Inhibitor

Sodium Silicate Lumps

- Catalysts and Catalyst Support
- Controlled Release Applications
- Refractory Binder
- Silica Gel Production
-

SLS Powder / Needles

SLS (Sodium Lauryl Sulfate) commonly comes in powder or needle-like crystal form. Here are some of its main uses:

- Personal Care Products (e.g., toothpaste, shampoo)
- Cleaning Products (e.g., dishwashing detergents)
- Textile Processing
- Emulsifying Agent
- Laboratory Reagent
- Industrial Processes (e.g., metal cleaning)

Soap noodles

Soap noodles are essentially the basic building blocks of soap production, typically made from oils, fats, and other ingredients. Here are some common uses of soap noodles:

- Soap Manufacturing
- Personal Care Products
- Household Cleaners
- Cosmetics
- Industrial Processes
- Textile Processing

LABSA 90 / 96%

Linear Alkylbenzene Sulfonic Acid (LABSA), available in concentrations of 90% and 96%, is widely used in various industries. Here are its primary applications:

- Detergent Production
- Household Cleaners
- Industrial Cleaning Products
- Textile Processing
- Agricultural Chemicals
- Leather Industry
- Adhesive Manufacturing
- Oil Well Drilling Operations

Benzalkonium Chloride (BKC) 50 / 80%

Benzalkonium Chloride (BKC), available in concentrations of 50% and 80%, has diverse applications across various industries. Here are its primary uses:

- Disinfectants and Antiseptics
- Preservatives in Pharmaceuticals and Cosmetics
- Biocides and Algaecides in Water Treatment
- Disinfection in Agriculture
- Wood and Textile Preservation
- Biomedical Applications
- Personal Care Products
- Sanitizing in the Food Industry

Zeolite 4a

Zeolite 4A, a type of synthetic zeolite, has various applications across industries due to its unique properties:

- Water softening in detergents
- Adsorption of moisture and gases
- Water treatment for removing hardness ions
- Air purification and odor removal
- Gas separation in membranes
- Personal Care Products
- Oil Spill Cleanup

Polyacrylic acid (PAA)

Polyacrylic acid (PAA) finds applications in various industries due to its unique properties

- Water treatment
- Personal care products
- Detergents and cleaners
- Textile processing
- Adhesives and sealants
- Paints and coatings
- Oil and gas industry
- Medical applications
- Food industry

Pursuit Industries Pvt. Ltd.

**1614-1622 Excellent Business Hub, Opp. Venus
Hospital, Lal Darwaja, Surat-395003, Gujarat, India**
